

SMALL & MEDIUM MUSHROOM

QUICK-BUILD INSTRUCTIONS

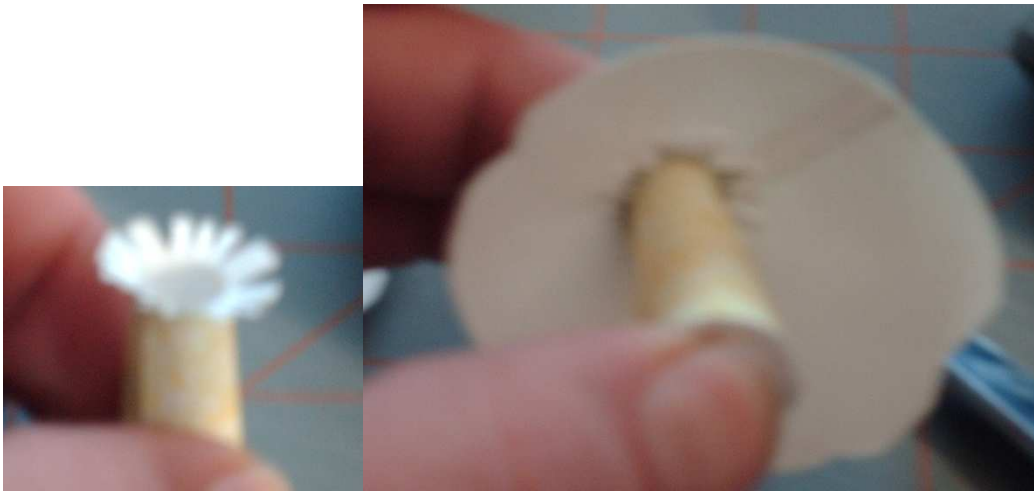

To Begin cut out the mushroom cap don't score the glue tab I also recommend pre edging the edge of the seam before gluing.

To make the cap deeper you can increase the width of the pie cut just don't get too carried away with it as an increase in depth of the cap reduces overall diameter of the cap. Glue the tab to the opposite side of the pie cut on the underside.

Cut out the stem score the tabs on the top & bottom but not the side tab, roll the stem around a pen, pencil, or the handle of your craft knife. Glue the side tab to inside of opposite side. Once it dries bend the tabs on the wide end in towards the inside glue them to circular cover. The tabs on the other side bend out & glue to the underside of the mushroom cap

Also you can adjust the angle or tilt of the cap to suit your tastes
I recommend coloring in the inside edge $\frac{1}{8}$ " to $\frac{1}{4}$ " if tilting the
cap so that no white shows just be careful in your marker choice
as a sharpie will bleed through to the outside a bit.
