MMiP #41, BATTLE CARS, weapons

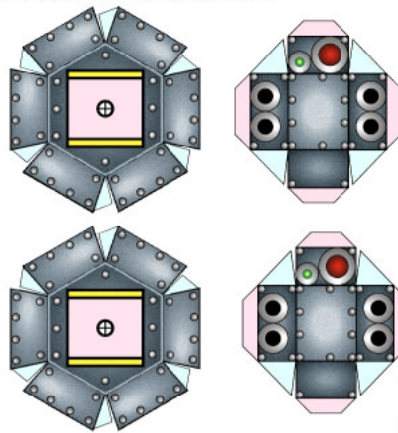

Score red lines before cutting out. Score all folded edges of the turret and turret topper!

The Turret uses a **ROUND TOOTHPICK** that goes though the small cross hair holes in the body. Cut only the cross hair lines. This will provide some resistance for the toothpick, and keep the turret from spinning around freely.

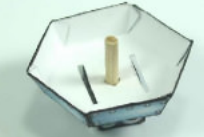

The flat weapons are designed to fit into the standard slots on the car body. be sure to test fit the weapons to be sure the tabs and slots all fit together. You can optionally glue the weapons in place, but they are designed to be removable.

This is the second batch of weapons. Look for more weapons, cars and game rules in the coming months at [ONEMONK.COM](http://ONEMONK.COM)

**Score all fold lines!**

Detail of turret underside. This shows how the toothpick goes into the upper part of the turret. The toothpick should be 15-20mm long.

**Be sure to cut out YELLOW slots on Turret.**

**Turret topper**

Glue blue tabs, fold in and glue pink tabs to turret.

**Mini-Turret**
