

Pop Up Bulette Instructions

1. Score all dotted lines
2. Cut out all parts
3. (Optional) Cut out two pieces of thick (i.e. cereal box) cardboard a hair under 1.5" x 3"
4. (Optional) Glue the thick pieces of cardboard on the bottom of the base.
5. Fold the label/tabs underneath the base.
6. Crease the base both ways (mountain and valley) along the score line and set aside.
7. Put glue on one of the unshaded, unhighlighted scale texture pieces and align it with the matching leg. There will be a little overhang on all sides except the bottom, at the tab crease.
8. Repeat step 7 with the other legs.
9. Cut away the excess paper on the legs from the top/front.
10. Edge the legs, belly, chin and tail with a black marker.
11. Grey is best to edge the "camo" tabs on the feet.
12. Fold the front tabs against the body, put glue on them and press the two halves together.
13. Repeat step 11 for the tail.
14. Fold the dorsal fin section (no eyes) in half before gluing it to the body in line with central front slope.
15. Glue the head to the top of the dorsal fin.
16. Fold the central support along it's crease and glue it together in the middle "camo" section.
17. Edge the "camo" bits with grey.
18. Put glue on each of the white end tabs and glue them to the inside of the body just behind the front legs.
19. Put glue on the "camo" tabs. Making sure the feet are not hanging over the base, glue the "camo" tabs to each side of the central crease on the base.
20. Put glue on the front and back leg tab of one side of the model and press them in place by folding the base shut.
21. Repeat step 18 with the other side.
22. Flatten the base and the Bulette should stand up. You may need to reach in and adjust the top tabs of the central pillar. When you do, it should open and close in the future with no problem.

↓ Feed this end into machine cutter ↓

Printing: turn scaling OFF, have centering ON, set to GOOD or BEST setting, Use Matte Photo paper for best results.
