

Flivver Automobile Set

2018 Grendels_Mother64

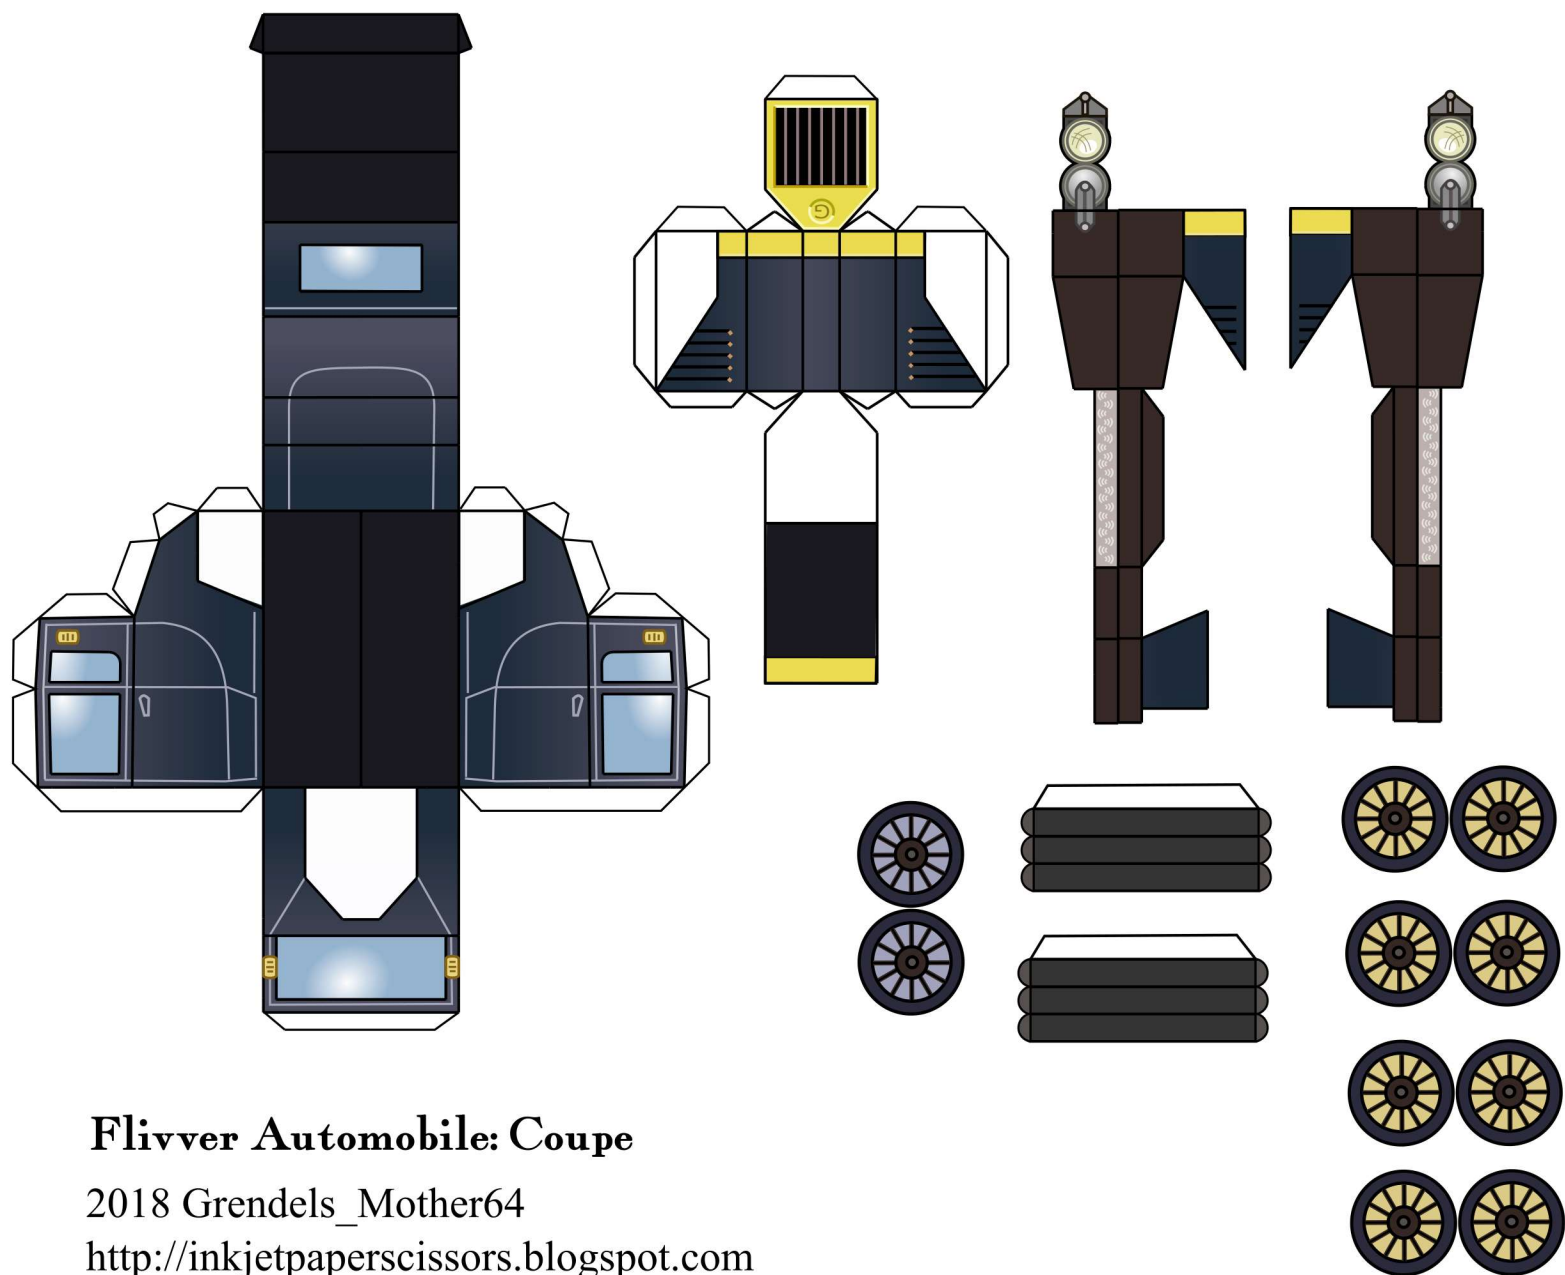

<http://inkjetpaperscissors.blogspot.com>

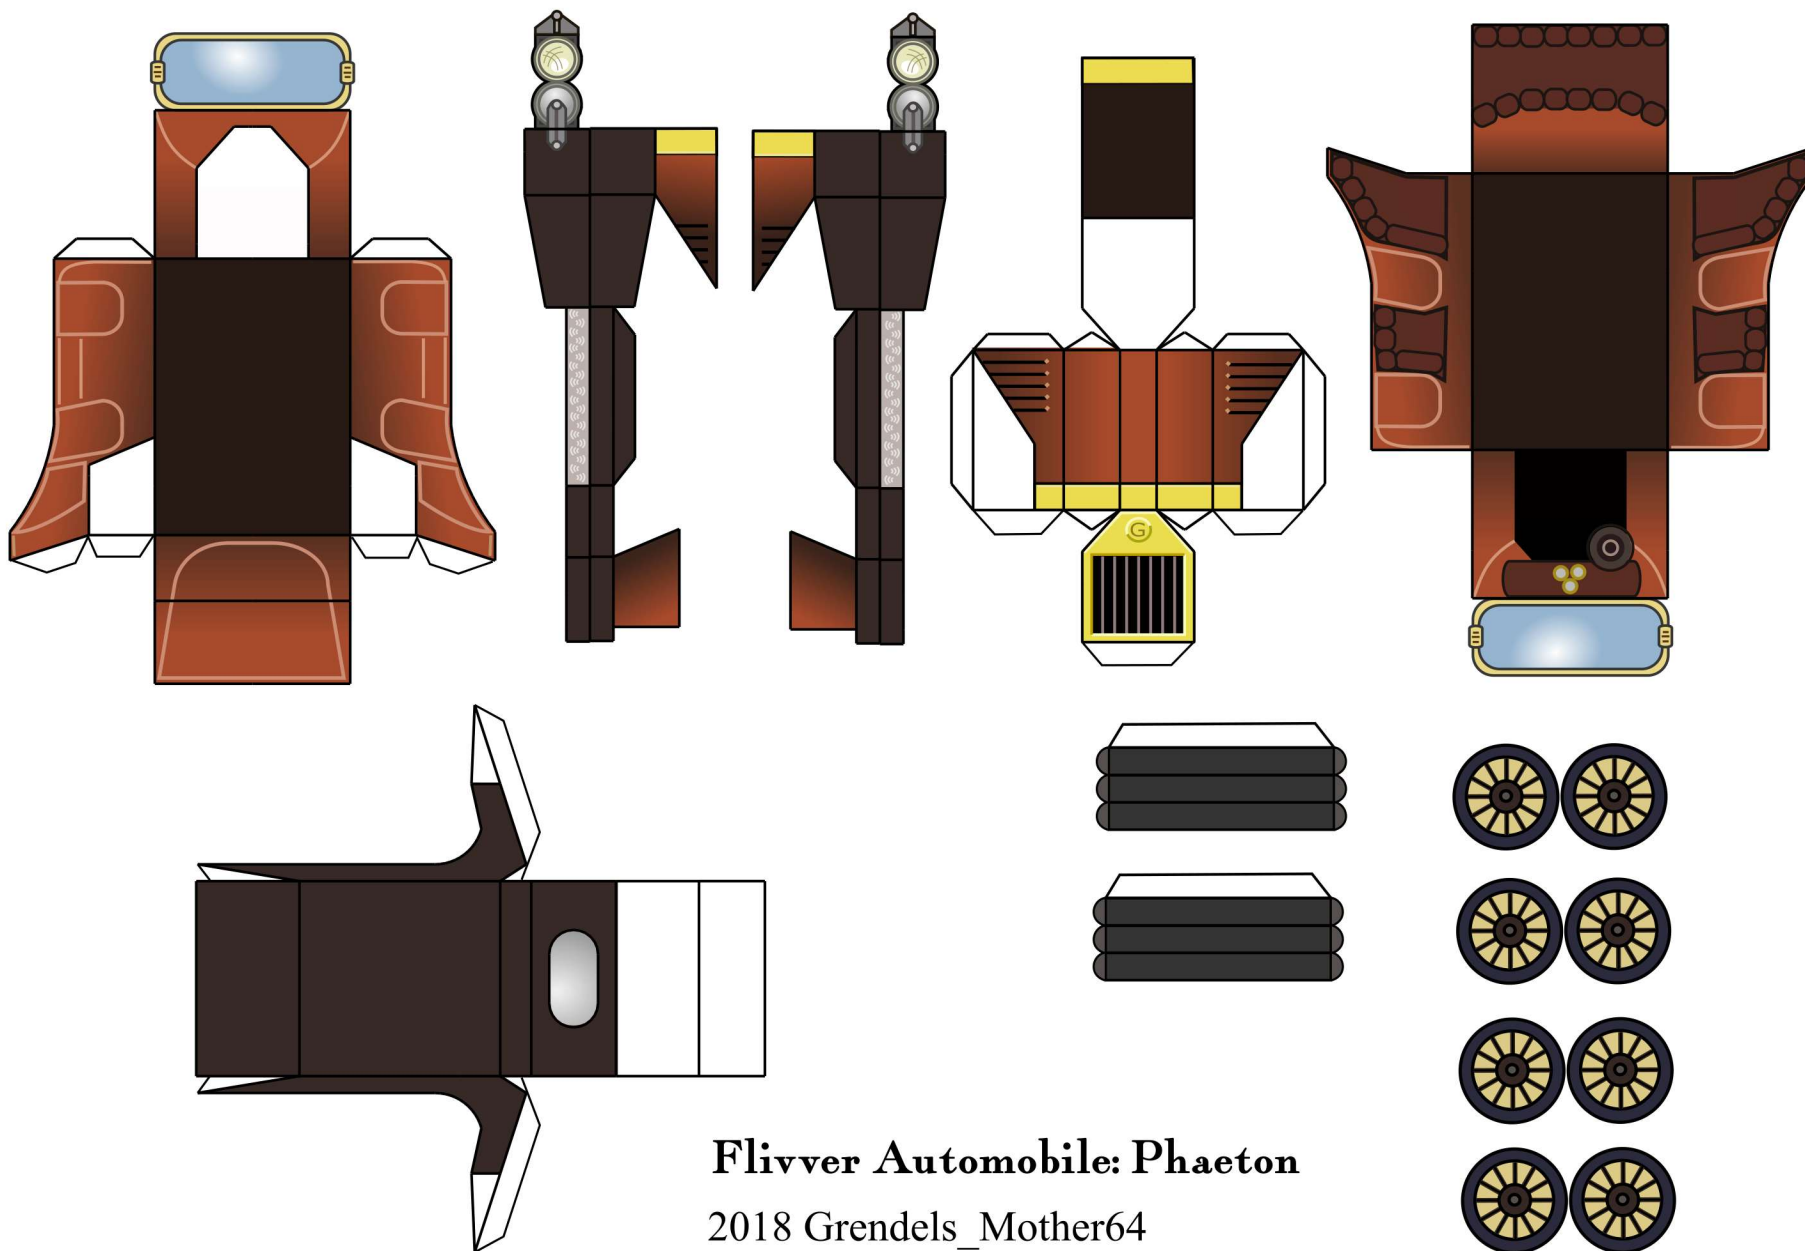

Instructions:

1. Cut out all pieces. Score fold lines, being particularly careful with the long fold of the fender pieces that fold top to bottom.
2. Build the auto motor block (bonnet). This is a fairly simple box shape with a raised top.
3. Build the auto bodies. These are simple boxes for the Sedan and Delivery Van, and an L shape box for the Coupe...with the windshield shade for each left outside the box . The Phateon (convertable) is an open box with an interior, and a slip in roof section. Cut each panel of the interior individually as they may need to be trimmed to fit. The Pickup body is a simple box, the bed an open box with exterior panels folding down and tabs tucked between, and beneath the bed is another simple box used to raise the Pickup bed a little. The 3 boxes are glued together to make the Pickup.
4. Glue the bonnet to the front of the body.
5. Fold and glue the fenders top to bottom along the long fold. Fold and glue the headlights front to back with a small tab tucking under the fenders.
6. Glue the fenders to the bonnet/body, lining up the odd shaped sections to the white spaces.
7. Glue the axles into a triangular cross section beam, folding out the small tabs at either end. Glue wheels front to back. Center and glue the axle to the wheels.
8. Glue axle to the bonnet lining up with the front edge. Glue axle to the body lining up with the back edge in the Sedan, the Coupe, the Phaeton, and the Pickup. Center the axle under the fender with the Delivery van.
